

The Menactra Vaccine is currently out of stock.

Please be aware the Menactra vaccine is currently out of stock with no expected date of availability.

Menactra is a meningococcal vaccine to protect against meningococcal groups A, C, Y and W. The vaccine is funded for children and adults with a medical condition that increases their risk of invasive meningococcal disease and includes teens going to stay in boarding school residence or university halls. The timing is terrible with the new school year starting and we apologise if this affects you.

Once we have been notified it is available again in NZ we will notify you here.
